

Healing process of semi-permanent make-up

Please note that a natural healing process takes place after a semi-permanent make-up treatment. In the first few days, there will inevitably be a slight crusting of the treated skin area. During the entire healing process, your eyebrows or lips will go through various phases. Be patient until the final result is visible.

Course of the healing processes:

Day 1:		Dab the treated area several times an hour with cotton pads and clear water.
Day 2-4:		The eyebrows / lips appear too thick and dry due to the crusting. For lip treatment: apply cream several times a day.
Day Tag 3:		For the eyebrows: apply a thin layer of cream once a day (preferably in the evening).
Day 4-7:		The fine encrustation falls off, the brows / lips appear blotchy. Continue to apply cream.
Day 8-10:		The eyebrows / lips appear very light in colour. You can clean them with cotton pads and water to remove the remaining crust. It is no longer necessary to apply cream.
Day 14-28:		The eyebrow / lip colour returns but may still look slightly uneven.
From Day 28:		The second treatment is now taking place.
From Day 42:		The eyebrows / lips are perfect!

For eyebrows:

Customers should note the following in the next 7-14 days:

- On the first day, the pigmentation should only encounter water. Soaps, cosmetics or similar products should be avoided. Direct contact with the fingers should also be avoided.
- From the second to the tenth day, no cosmetics or care products should be applied to the pigmented area. Only the recommended products should be used.
- The post-treatment cream should be applied thinly with a Q-tip. Carefully clean the pigmented area with a damp cotton pad beforehand. Other creams can cause infections or complications.
- Solarium, swimming, sauna, heavy sweating (sports) and direct sunlight should be avoided until the 10th day.

For lip pigmentation:

- **Day 1-2:** Clean lips with moist cotton pads, keep clean, only drink with a straw or your own cup. No spicy food, no smoking with lip contact.
- **Day 3-4:** Slight scaling possible. Without herpes, apply cream daily to moisturise and heal.

Important: No swimming, sauna or steam bath for one week. No kissing for two days.

What to do if the client does not have herpes:

Apply the cream continuously at least once a day to provide the lips with sufficient moisture to ensure rapid recovery and to maintain/stimulate collagen formation. Do not go swimming, use the sauna or steam bath for at least 1 week after the treatment. Do not kiss in the first 2 days after pigmentation.

For eyeliner:

- **Before treatment:** No blood-thinning medication one week before. Avoid caffeine and alcohol on the day of treatment. No eye make-up for at least four days beforehand.
- **After treatment:** No water or cosmetics in the treated area for 24 hours. No sun, sauna or swimming for at least one week. Avoid facial contact while sleeping. Care according to the cosmetician's instructions. No eye make-up for seven days.
